Employment

Senior Software Engineer (React/Redux)

Jan 2018 – Feb 2025

Innovecs/Ummanu, Kyiv, Ukraine

Ummanu — a global leader in telemedicine, providing services to over 18 million clients and delivering more than 2 million remote consultations annually, revolutionizing access to healthcare worldwide.

- Worked on key features of platforms for doctors and patients, including video and SIP call systems, interactive modules, and user-friendly interfaces.
- Contributed to the development of the administrative console by creating individual modules for management and analytics.
- Implemented architectural solutions for complex functionalities, performed code refactoring, and optimized performance.
- Integrated APIs and third-party services, ensuring product stability and reliability.
- Participated in scaling the product for international markets, providing long-term support and development.

FrontEnd Developer (React Native)

Aug 2017 – Jan 2018

Empeek, Lviv, Ukraine (remote)

iOS/Android applications for organizing and managing outdoor training sessions.

- Developed iOS and Android versions using React Native
- Implemented core features
- Optimized performance

FrontEnd Developer (Angular)

Jul 2016 – May 2017

ESportsField, Kyiv, Ukraine

A platform for managing and automating cyber sport tournaments, enabling seamless organization of matches, automated result tracking, and efficient competition management.

- Developed the application's frontend using AngularJS, focusing on creating a seamless user experience for tournament participants.
- Implemented media widgets to display game highlights and match data dynamically.
- Designed and developed tournament grids for visualizing match progress and schedules.
- Integrated the application with the backend API to enable real-time updates and automated workflows.
